The Human Resources Manager
Melbourne, Victoria 3000, Australia

Dear Human Resources Manager,

I would like to apply for the advertised position **.Net Developer** as advertised on the Internet. Having worked as a Web Programmer for a multinational company in 2 years, I was exposed to many different languages and technology stacks. Most of them are the ones that match your selection criteria listed in your ad. Therefore, I truly believe that I myself will be a strong candidate who you are after for the vacancy.

To be more specific, when I was working for Hafele Australia, my main responsibility is to develop applications that help the business function more efficiently. The applications are varying from Internal Intranet Forms to External Applications. These apps aim to facilitate the communication between the company's departments and the communication between the company and its customers.

Developing these apps gave me lots of experience. Not only do I improve my technical skills, but I also learn how to work with people from different background. I can communicate well with business people to gather requirements as well as with my team and supervisor to divide the workload. The tech stack I was mainly using are:

- C#, ASP .NET MVC, WCF, MS SQL and Window Server for Backend
- Javascript, Angular JS, MaterializeCSS, Bootstrap & JQuery for Frontend
- Web technologies: XML, JSON, etc.
- VSTS for Version Control and Continuous Integration

I also have experience with SAP System and Ecommerce. I have developed a new customized theme for HafeleHome (using Shopify) and several apps that integrate end-consumer web portals with SAP System.

With these skillset and experience, I am confident that I will be your perfect match and will contribute significantly to your company.

Please find my resume attached. I am looking forward to hearing from you to discuss my application further.

With Regards,

Tai Le
